Here's how to get the gray/yellow lines back in order after entering new data:

First, you must have your cursor in the table on one of the colored stripes,  
Then a tab will appear at the top of the screen called (DESIGN), select that tab,  
There's a section called "Table Styles"  
You'll need to select from those styles the view for gray/yellow alternating lines  
Click on it and it will put it back to alternating gray/yellow lines
